

CompTIA ITF review

1. What is the exact number of bytes in a gigabyte?
 - a. 1,024 bytes
 - b. 1,048,576 bytes
 - c. 1,073,741,824 bytes
 - d. 1,099,511,627,776 bytes
2. Where does the changes located before they are permanently stored in a hard drive when editing a document?
 - a. SSD
 - b. CPU
 - c. RAM
 - d. GPU
3. What data type should a database administrator use to store customer postal information?
 - a. Float
 - b. String
 - c. Boolean
 - d. Integer
4. What business continuity concepts is the best example of fault tolerance?
 - a. Data restoration
 - b. Redundant power
 - c. Disaster recovery
 - d. Restoring access
5. When the printer drivers of a newly purchased printer are not installed in a PC, the user will be:
 - a. unable to print
 - b. The OS have not been applied
 - c. The firewall has not bee configured
 - d. The security software is outdated
6. A document sharing software is best used to store a project task list that will be updated by multiple team members.
 - a. Visual diagramming software
 - b. Document sharing software
 - c. Database software
 - d. Conference software
7. In database management, which is an example of a query language?
 - a. C
 - b. HTML
 - c. Python
 - d. SQL
8. Which programming concepts uses properties and attributes?
 - a. Class
 - b. Objects

- c. Functions
 - d. Variables
9. Which programming construct that is most beneficial for organizing a programs data and behavior.
- a. License agreements
 - b. Object
 - c. Query
 - d. Constant
10. Scenario: an attacker is using subversive tactics in order to gain the trust of a target for the purpose of obtaining entry to a location or access to confidential information.
- a. Phishing attack
 - b. Social engineering
 - c. On-path attack
 - d. eavesdropping
11. Which is the easiest component to upgrade on a laptop that is experiencing slow performance?
- a. Harddrive
 - b. Motherboard
 - c. GPU
 - d. RAM
12. To avoid this attack, confidential documents must be shredded before disposal.
- a. Dumpster diving
 - b. Destruction
 - c. Social engineering
 - d. Shoulder surfing
13. Which is used to protect intellectual property while requiring the owner to provide the public with working details?
- a. Copyright
 - b. Patent
 - c. Trademark
 - d. license
14. Which best describes the outcome of a text message that is encrypted from its original form?
- a. Algorithm
 - b. Cipher
 - c. Vector
 - d. plain
15. During troubleshooting, what do you call the process of determining the source of an issue?
- a. Diagnosing
 - b. Documenting
 - c. Verifying
 - d. Researching
16. Which is an example of utilizing a personalized code for continuous personal access to a software product?

- a. Product key licensing
 - b. Site licensing
 - c. Open-source licensing
 - d. Single-use licensing
17. Which application delivery method is used when a product advertising kiosk at a mall is setup using a thin client without hard drive and is running a web application managed and updated through an internet connection?
- a. Local network hosted
 - b. Cloud-hosted
 - c. Hybrid installed
 - d. Locally installed
18. Which internet service type is most susceptible to weather disruptions?
- a. Satellite
 - b. Cable
 - c. Fiber
 - d. DSL
19. Which creates a multifactor authentication when used with something you have?
- a. Hardware token
 - b. Single sign-on
 - c. Password
 - d. Geolocation
20. Which you think best explains the reason for password expiration?
- a. To disable unused user ID
 - b. To invalidate any compromised passwords
 - c. To discourage writing down passwords
 - d. To enforce new password complexity rules
21. An online retailer experienced outage where investigation reveals that the server receives more requests than it could handle and customers could not log in as a result. How do you describe the scenario?
- a. Denial of service
 - b. Hardware failure
 - c. Social engineering
 - d. On-path attack
22. What is the possible issue when a new device has been installed on a wired network and can be accessed via the LAN but cannot be accessed remotely?
- a. Misconfigured access point
 - b. Firewall settings
 - c. Improper switch configuration
 - d. Incorrect IP address
23. Which security-related best practices would be used when an IT manager wants to prevent end users from booting alternative operating systems on workstations?
- a. Setting up BIOS password

- b. Installing a host-based firewall
 - c. Patching the OS
 - d. Removing unnecessary software
24. Which protocol is used to relay email from user's email server?
- a. SMTP
 - b. IMAP
 - c. POP3
 - d. FTP
25. A user browses a website that send messages that the site is not secure even before the page opens. What might be the cause of the message?
- a. Certificate
 - b. Proxy
 - c. Script
 - d. Malware
26. In which of the intellection property rights can a company use to protect its logo?
- a. Trademark
 - b. Domain name
 - c. Patent
 - d. Copyright
27. Which is an advantage of a flat file?
- a. Portability
 - b. Scalability
 - c. Variety of data
 - d. Multiple concurrent users
28. A technician has received multiple reports about a media player which is located in a waiting room, turning on and off at various times a day. After the technician replaces the power adapter and turns the player bac on, which should the technician do next?
- a. Verify full system functionality
 - b. Document the findings
 - c. Research the knowledge base
 - d. Implement the solution
29. Which is most likely going to happen in 60-day when a corporate network just implemented a 60-day password warning banner?
- a. Password reset
 - b. Password expiration
 - c. Password reuse
 - d. Password implementation
30. Which connection type is typically used for a display monitor?
- a. DVI
 - b. USB
 - c. Bluetooth
 - d. RJ-45

31. A technician is having trouble connecting multiple user's laptops to the internet wirelessly. The users are on the east side of the building which is hardwired. What should the technician do to resolve this issue quickly?
- Add a network router
 - Add a switch and hardware the users laptop
 - Add an access point for the user
 - Replace the users' laptop with desktop PC
32. A user is selecting software to use to prepare handouts for presentation. The user would like the information to be easy to format and printer friendly. Which software type should the user select?
- Spreadsheet
 - Word processing
 - Text editor
 - Visual diagramming
33. A programmer needs an element that will automatically store customer orders consecutively by order number every time a new order is placed. Which element would be the most appropriate?
- Array
 - Vector
 - Sequence
 - Constant
34. Which is the most secure file system?
- FAT32
 - NTFS
 - NFS
 - exFAT
35. Which scripting language is most likely to be used in a Linux command-line environment?
- Bash
 - Javascript
 - Powershell
 - C++
36. Which would be the best reason to implement a host firewall?
- To prevent external access
 - To prevent hardware failures
 - To prevent wiretapping
 - To prevent software removal
37. Employees must use a badge to enter and exit the building. Each time the badge is used, a log entry is created and stored to record who has entered and exited the building. Which best describes what the log entries provide?
- Authentication
 - Authorization
 - Automation
 - Accounting

38. A collection of fields about the same object describes the concept of a database record.
- a. A collection of fields about the same object
 - b. A collection of rows, columns and constraints
 - c. A collection of schemas within the same database
 - d. A collection of tables within different schemas
39. Which provides the fastest internet speed?
- a. Fiber to the curb
 - b. Cellular
 - c. ADSL
 - d. SDSL
40. Which database structure is the most granular?
- a. Record
 - b. Field
 - c. Column
 - d. Table
41. Which file system is compatible with the greatest number of OS?
- a. FAT32
 - b. NTFS
 - c. HFS
 - d. Ext4
42. Which is correct when an application is hosted on a local network?
- a. LAN access is required
 - b. The application exists locally
 - c. Files are saved in the cloud
 - d. Internet access is required
43. Which has the slowest processing speed?
- a. 1.2 GHz
 - b. 2.4 MHz?
 - c. 200 Kbps
 - d. 200 Mbps
44. A help desk technician loads a browser-based ticketing system, but when navigating to the queue, the technician realizes that another employee's queue is being accessed. What is the issue all about?
- a. The previous user's session is cached
 - b. The proxy settings were misconfigured
 - c. The application is not compatible with the browser'
 - d. The browser was opened in private mode
45. A system administrator is setting up an output that supports both USB and network capability. Which device is the administrator installing?
- a. Printer
 - b. Scanner
 - c. Fax

- d. Camera
46. Which describes commands used to extract information from a database?
- a. DML
 - b. DDL
 - c. DDR
 - d. DLL
47. Which action should the technician take next after a technician verified full system functionality?
- a. Document the findings
 - b. Question the user
 - c. Determine if anything has changed
 - d. Gather information
48. Which will meet the requirement when a user needs an interface that supports both video and data?
- a. DVI
 - b. Thunderbolt
 - c. VGA
 - d. Firewire
49. Which type of OS pertained to when a technician travels to a data center to review specifications on a new project.
- a. Hypervisor OS
 - b. Mobile OS
 - c. Workstation OS
 - d. Embedded OS
50. Given this example: FEB8077911AB12TB which of the following is represented?
- a. MAC address
 - b. String
 - c. Hexadecimal
 - d. Unicode
51. Which is most likely associated with database use?
- a. Querying
 - b. Creating diagrams
 - c. File sharing
 - d. Printing
52. Salespeople roam around a retail store conducting transactions. Which computing device would be most ideal for point-of-sale transactions?
- a. Cellphone
 - b. Workstation
 - c. Laptop
 - d. Thin client
53. A user is trying to setup a new wireless access point. Which should the user do first?
- a. Change the SSID to a unique name
 - b. Reset the default password

- c. Enable WPA2 encryption
 - d. Enable the highest available wireless standard
54. Which is a compiled language:?
- a. C
 - b. Python
 - c. HTML
 - d. SQL
55. Which are the benefits of a security awareness training program(select two)?
- a. Creates IT security opportunities for end users
 - b. Advances end users technical skills
 - c. Increases availability of computers
 - d. Lowers the incidence of hardware failures
 - e. Provides info on how to avoid phishing
 - f. Enhances overall security
56. Which represents the level of privacy employees should follow when provided access to the internet as their work resource?
- a. Only the attempts to access unapproved URL's are logged
 - b. All internet usage is logged by a corporate server and may be monitored live
 - c. All internet browsing is private and anonymious
 - d. Only the attempts to access sites
57. Which discloses the data collection practices of an application?
- a. Vendor website
 - b. README.txt file
 - c. User's guide
 - d. EULA
58. Given the following lines
- ```

If grade is greater than 74.5,
 echo "Passed"
else
 echo "Failed"

```
- is an example of:
- a. Flowchart
  - b. loop
  - c. pseudocode
  - d. sequence
59. A programmer can generate results thru iterations providing values / data needed for calculation:
- a. Condition
  - b. Sorting
  - c. data type
  - d. Looping

60. Which memory can retain its contents after the system restart?
- a. ROM
  - b. RAM
  - c. DIMM
  - d. DDR
61. In a database, which access method to use in order to display a subset of table?
- a. SELECT
  - b. UPDATE
  - c. DROP
  - d. INSERT
62. Which software solution ensure that program running simultaneously on a workstation do not utilize the same physical memory?
- a. Type 1 Hypervisor
  - b. Disk defragmenter
  - c. Operating system
  - d. Anti-virus
63. a user inserts a USB flash drive into a PC for the first time and sees a message on the screen indicating the device is being setup.
- a. Plug and play
  - b. Driver installation
  - c. IP-based
  - d. Web-based
64. Which uses platters to store data?
- a. Hard drive
  - b. SSD
  - c. Optical drive
  - d. Flashdrive
